

## EASY GROUNDING : Grounding solution

**SAVE TIME AND MONEY** for your projects !

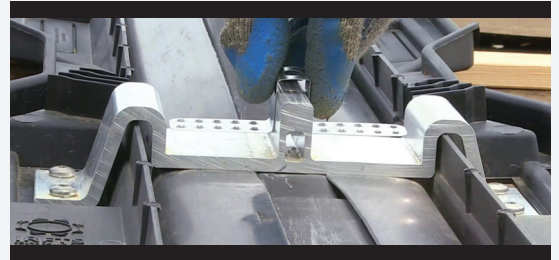

Thanks to **EASY GROUNDING**, the grounding of your PV installation (done with **EASY ROOF EVOLUTION**, **EASY ROOF INDUSTRIAL** and **EASY ROOF FLAT**) is easier and faster.

### HOW IT WORKS ?

Just add one EASY GROUNDING on one EASY ROOF EVOLUTION double bracket or EASY ROOF INDUSTRIAL rail, to connect 2 PV panels.

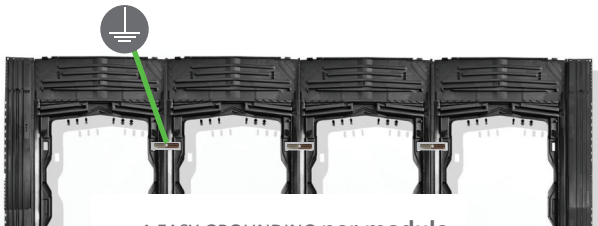

Under the clamping torque, the teeth of the EASY GROUNDING pierce the anodized coating and create bond between PV panel and the EASY ROOF mounting system for path to electrical ground.

### HOW TO INSTALL ?

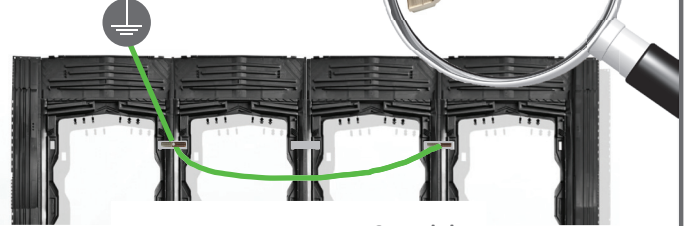

2 options according to the regulation of each country

Option n°1

**1 EASY GROUNDING per module**  
No wire connection between brackets  
Only 1 bracket wired to the ground for the whole line

Option n°2

**1 EASY GROUNDING every 2 modules**  
Wire connection between the brackets

## ADVANTAGES

- ✓ Speed of mounting
- ✓ Only one reference
- ✓ No change needed in case of PV module replacing
- ✓ Durable stainless steel : no corrosion issue
- ✓ Meets with UTE C 15-712, NF C 15-100 and UL 2703 standards
- ✓ System reliability approved by independent laboratory
- ✓ Adjustable with all modules compatible with EASY ROOF EVOLUTION, EASY ROOF INDUSTRIAL and EASY ROOF FLAT
